A bibliometric analysis of review on folk art

Feng Lijuan and Ahmad Rizal Abdul Rahman

Faculty of Design and Architecture, University Putra Malaysia, Malaysia

ABSTRACT

Folk art is a kind of visual art and arts and crafts formed under the background of folk culture, which is considered as the symbol of traditional culture. But all forms of traditional arts and crafts are threatened by a globalized culture. Many scholars have made multidimensional analysis of folk art from different perspectives. There is a significant gap in the comprehensive literature review on folk art. In order to bridge this gap, this paper adopts the method of bibliometrics to review the existing research on folk art based on Scopus database. With the impact of modern industrial design on folk art and craft, folk art has become a hot topic of cultural communication in recent years. Therefore, this study has two main purposes: (i) to analyze the nature and evolution of academic articles related to folk art. (ii) To identify thematic areas related to the study of folk art and their links with interdisciplinary fields. To achieve this goal, we performed a bibliometric analysis of the 2353 journal articles, books and related international conference articles listed in Scopus. Through the analysis, research activities related to folk art have increased significantly, and the multidimensional, interdisciplinary nature of research is also illustrated. However, there is still room for further research into the impact of interdisciplinary collaboration and how folk art and craft can be activated and applied in modern design.

ARTICLE HISTORY

Received 5 June 2023
Revised 22 January 2024
Accepted 1 November 2024

KEYWORDS

Folk art; bibliometric review; handicrafts; art therapy; cultural heritage

SUBJECTS

Visual Arts; Philosophy of Art & Aesthetics; Regional Art; Visual Culture; Visual Arts; Cultural Studies

1. Introduction

This study of folk art is an important part of the development of art, the literature review of folk art is the preparation for the development of research on folk art. Although there are studies related to folk art in the Web of Science and Scopus databases (Jia, 2019) According to the academic database, there is no literature review on folk art research in the Chinese context. As for research methods in the field of folk art, some studies can be used as reference, for example, some scholars adopt quantitative research methods based on software analysis to review specific topics (Moustakas, 2022; Prados-Peña et al., 2022). Some scholars use quantitative analysis to build thematic models (Grabowska and Saniuk, 2022). Few scholars use bibliometric research method to review the folk art, so the author sets out to use this research method to make a quantitative analysis of the literature related to the folk art and classify the research topics. The purpose of this study is to fill in the research gap of the literature review of folk art and clarify the current research hotspot and future research trend. Our research results show that the integration of folk art and cultural heritage (Fan, et al., 2020; Khac et al., 2021), education (Liu et al., 2017 Xie, 2017), folk art and modern design has become the main topic of this research field (Hu & Liu, 2017), art therapy has become a new interdisciplinary research and development topic (Day, 2017), and the application of high-tech in teaching innovation will become a new hotspot of future research.

Among them, the application of folk art needs to be further explored. Folk art continues to show its charm in art education and modern visual design applications. High-tech, digital technology in folk art preservation and application of innovation will become a new research hotspot in the future.

2. Research methodology

2.1. Bibliometric methodology

The purpose of the research is the research direction and development trend of folk arts. Using scientific literature database to analyze folk art research. Bibliometric analysis is responsible for reviewing different literature materials and organizing relevant information on a particular topic. It is also a presentation that seeks to assess the status and quality of scientific publications and the influence of their authors and sources on a given topic (Van Raan, 2014). Bibliometric is an effective method to determine growth and future trends. Bibliometric methods have been used for research. The bibliometric method has been used to study the growth of topics, to find relationships between logical progress and modification, and to identify relationships between disciplines. In this paper, 2353 articles collected from Scopus database were analyzed in detail. VOSviewer, Microsoft Excel, Xmind and other software were used to provide informative data visualization charts to reveal the relationships, trends and collaboration networks among topics.

Scientific mapping is a visual representation of the concepts, knowledge and social structure of a field of study. These steps are shown in Figure 1 below. In this research method, bibliometric analysis in this paper is based on graphic data analysis of authors, document co-citations, institutions, countries and keywords in this field. The steps of this study are shown in Figure 1: select an appropriate database, determine search terms, select analysis software and analyze the results. VOSviewer was used for visual analysis of co-occurrence keywords, countries and authors, and Excel software was used to tabulate the data and bibliometric in Scopus database for graphic data analysis. I summarize the process and scheme of this research method (Figure 1).

2.2. Definitions of search terms

This study has two main objectives: (a) to analyze the nature and evolution of academic articles related to folk art. (b) Identify thematic areas related to folk art research and their links with interdisciplinary fields. This paper selects 'folk art' in the determination of keywords, and searches 'folk craft' at the same time. There are only more than 300 articles about 'folk craft', which is relatively narrow in scope. 'Folk art' found 2353 related articles and finally determined the search term as 'folk art'. Meanwhile, TITLE- ABS-key (Folk Crafts) was retrieved, and 230 articles were retrieved. TITLE- ABS-Key (Folk Arts and Crafts) was searched, and 230 articles were also retrieved. On searching using keywords 'bibliometric' and 'Folk Art', 23 related articles were found.

2.3. Database selection

Scopus was selected as the database for this study. In this study, Web of Science (WoS) was initially used to search for the keyword 'folk art', and 829 articles were retrieved. In terms of research methods and topics, WoS articles on art were relatively small in number. Finally, Scopus database was selected for data analysis. TITLE- ABS-key (Folk and Art) was searched and 2353 articles were retrieved.

2.4. Data collection method

A topic search (title, abstract, keywords, 1 November 2021) was conducted on Scopus database using the search term 'folk crafts'. All articles, including journal articles, review articles, book chapters, conference articles, books and conference reviews, are included in the results, with a time limit from 1884 to 2022. During the designated period, a total of 2353 projects were identified. The types of articles are literature and articles are divided into eight categories: articles (1413; 60%) and review articles (287; 12%), book chapters (153; 6%), conference articles (228; 9%), books (117; 4%), conference reviews (12; 0.5%) and others such as early conference reviews and editorials. Among them, the keyword 'Folk art and craft' was limited at the same time, and 230 articles were obtained. The multidisciplinary papers on art education, folk, traditional innovation, cultural history, anthropology and so on were selected for detailed analysis.

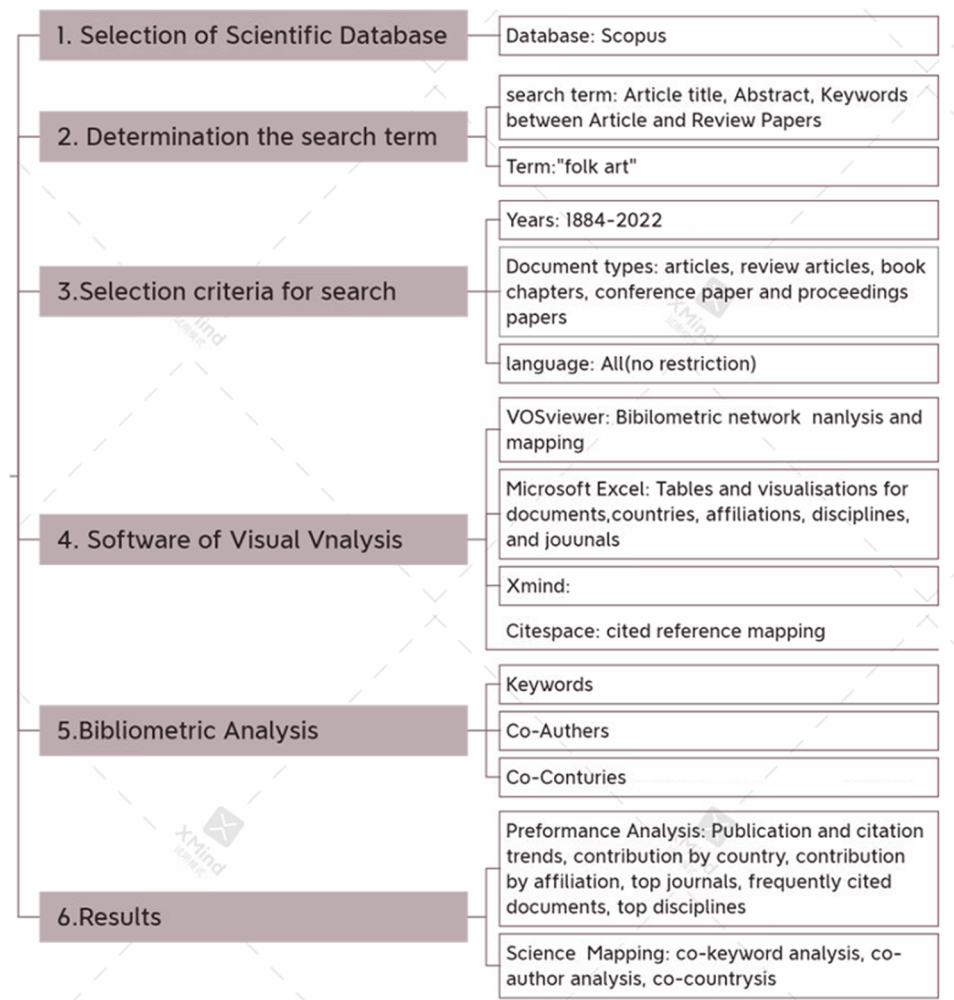

Figure 1. Methods and steps of bibliometric analysis.

2.5. Analysis software selection

Integrated visualization software was used to manage and analyze the data. VOSViewer is a software tool for building visual bibliometric network diagrams. This software is used to extract authors, keywords and countries for visual network graph analysis, and Microsoft Excel software is used to manage data tables and generate data related to publishing trends, distribution of publications of countries and institutions. COOC12.6 is a software used for bibliometrics and knowledge mapping. In this paper, co-Occurrence12.6 (COOC12.6) software is used for synonymization, annual publication frequency statistics and co-occurrence matrix analysis. COOC software was used to extract data from RIS files of the exported database and transform them into EXCLE format. Combined with EXCLE software, visual analysis of tables was made.

3. Data analysis

The data analysis was carried out in two parts. The first part is the trend growth model analysis, the growth of publications, authors of the number of publications and the number of countries and institutions published on the 'folk craft' regional distribution. The second part focuses on the scientific map to observe the knowledge structure map of the field through the construction of bibliometrics. In particular, visualization of authors, annual publication trends, keywords and regional distribution of national research. Finally, the topic of keyword cluster is analyzed to analyze the change of keywords and the trend of the research field.

3. Results and discussion

The data collected from Scopus database were analyzed according to publication year, study region, author and keyword change of folk craft research topic to study the research trend of folk art.

3.1. Analysis of annual publication trend

In the current study, a total of 2353 records published in journals, books or conferences for the keyword 'folk craft' were analyzed for articles from 2010 to 2021. As shown in Figure 2, the horizontal axis is the year, and the vertical axis is the corresponding annual number of publications. In the past 20 years, the number of publications has been gradually increasing since 2014. In 2014, the number of publications has increased significantly. From 2019 to 2021, the number of publications in the past 3 years has shown a sustained and rapid growth. In 2020, the number of published articles reached the highest number, 161. According to the research results and the research on the trend of folk-art publication, folk art has attracted more and more professional attention. On the other hand, the increasing number of articles indicates that people are increasingly interested in the field of folk art.

The surge in the quantity of articles further signifies the escalating fascination with folk art. The growing popularity of folk art has undergone significant transformations, mainly due to the advancements in information technology, network technology and digital technology. Liu et al. propose utilizing multi-media platform technology to enhance the diffusion of folk art, hence promoting science and art education related to folk-art and intangible cultural assets. In the contemporary information society, communication technology is aligned with modern science and technology advancements. In contrast, the preservation and advancement of traditional folk-art forms have reached an unprecedented degree. The field of folk art is progressively evolving towards digitization and the use of intelligent technologies. In his 2020 publication, Li introduces the idea of an innovative cloud platform for folk art. The purpose of this platform is to transform the user experience and facilitate the integration of folk art with virtual reality (VR) technology. Li utilizes optimizing virtual reality technology's visual orientation to convey folk art's sensory, existential, and interactive qualities and improve the approach to safeguarding and transferring folk art expression. Tian (2023) explores the application of artificial intelligence in appreciating artist styles. The study uses image style transfer technology to establish a platform for disseminating folk art. The aim is to contribute to promoting aesthetic education in folk art. The seamless incorporation of contemporary art design and traditional folk art into virtual reality technology holds immense importance in the expression and advancement of folk art.

3.2. Distribution analysis of national regional studies

In terms of folk art, the 10 most productive countries were selected for regional distribution studies, as shown in Figures 3, 4 and 5. Figure 3 shows the volume of national publications in the relevant field, and Figure 4 shows the percentage of national publications in the year. The top 10 countries are: The United States, The Russian Federation, China, the United Kingdom, Turkey, India, Kazakhstan, Germany, Japan and Thailand. In terms of the number of publications, the United States, the Russian Federation

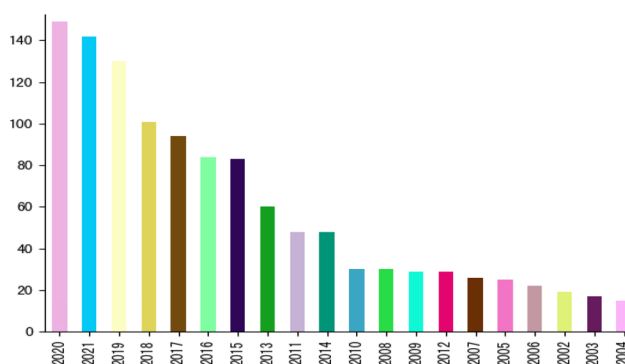

Figure 2. Number of annual publications related to folk art.

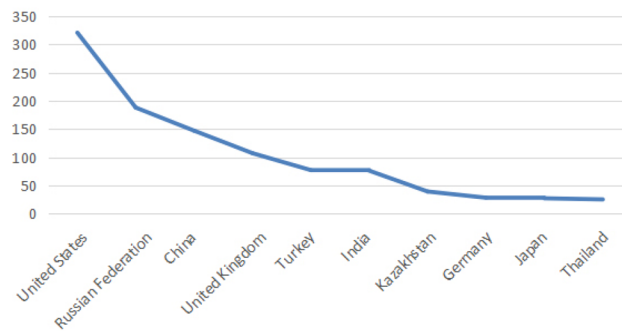

Figure 3. Countries and number of publications.

Figure 4. Proportion of countries and publications.

and China lead the way. The United Kingdom, Turkey and India followed, with the United States contributing the most, 321, or 31% of the total. It was followed by the Russian Federation (188) and China (147), accounting for 18% and 14% of publications, respectively. The UK was next with 107 publications (10%). Data studies show that many countries in developed areas do not have sufficient research on folk art, and the research on folk art is not closely related to the country's economic and technological strength. Countries with a long cultural history pay more attention to the development of folk art.

It shows the country association graph, using VOSviewer (Figure 5), a joint country analysis was run and a cluster association strength graph was generated using VOSviewer. Only countries with at least six documents are included, resulting in a total of 32 countries divided into eight clusters. Groups represent collections of closely related and co-occurring countries. In visualization, more people tend to be closer to each other. The United States and China are at the center, with 31 and 26 links, respectively. The green cluster is mainly characterized by the United States and Russia, Turkey, India, Mexico and other countries with high correlation, while the blue cluster is China, Britain, France and Japan. The red cluster

is Canada, Italy, Australia, Germany and other countries, in addition to these relatively developed countries, there are some small countries with a long history, such as Slovenia, Ireland, Romania, Poland and other countries. Among them, Turkey as the center, and the United States, Russia and other developed countries are relatively high correlation, and Romania, Brazil, India, Thailand, Mexico, Brazil, Hungary.

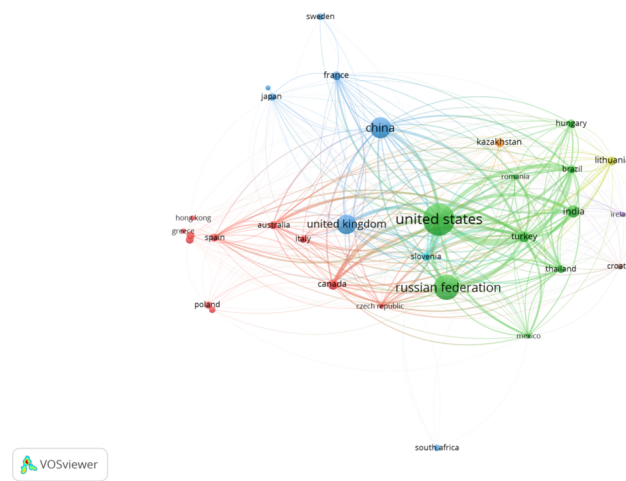

Figure 5. Network of cooperation between countries.

Jackins (2019) explores the correlation between art and folklore through an anthropological lens. Emily de Forest, an arts patron from New York, played a crucial role in establishing a folk arts and crafts museum. This initiative eventually led to the creation of the Museum of Folk Art. McClellan (2021) seeks to identify barriers and potential areas for improvement in American art institutions. According to McClellan, the presence of inherited collections and taxonomies in museums restricts the importance given to aesthetic considerations, values and narratives based on how quickly and extensively they may be adjusted. Coffey (2018) The transnational exhibition in Los Angeles aims to examine the exhibition's political implications and its influence on the resettlement of the Mexican American diaspora. Recently, academics have investigated the obstacles and advancements in folk art from anthropological and folkloristic viewpoints. Additionally, there has been a greater emphasis on exploring the connection between folk art and museums. The inclusion of folk art has enhanced the variety and expertise of museums in the United States.

Many Russian artists and philosophers have endeavored to provide a systematic structure for visual forms that can be likened to the grammatical rules of language. Russian folk art offers a more specialized utilization of the artistic medium. Investigate historical and customary forms of craftsmanship, examine unsophisticated creative and artistic representations of daily life, and assess the artistic heritage of folk artists. Hilton (1989). The formal components of folk art are connected to the aesthetic composition of rural households, buildings, domestic implements and attire. The worth of folk art is evident not only in the physical and perceptible characteristics of the artwork itself but also in the essence of the art. The resurgence of folk art fostered the development of modernist movements in various artistic disciplines, including painting, sculpture, architecture, applied arts, and performing arts. In his 2019 publication, Hilton examines the relationship between folk art and national aspirations in Russia and Eastern Europe. He sheds light on the significance of incorporating folk art into contemporary contexts and emphasizes the ongoing relevance of traditional craft education. To promote the growth of various methodologies in modern design in Russia. Galkina suggests utilizing contemporary design methodologies and technologies to enhance the development of educational initiatives in the field of art and culture within the Moscow region's historical and cultural heritage reserves. Russian researchers are increasingly focusing on art education, incorporating the elements of folk art into art education programs to enhance the cultivation of artistic literacy in Russia.

Folk art's preservation and inheritance methods have also transformed in response to information technology advancements. There has been a significant rise in the quantity of pertinent studies

conducted by Chinese scholars on the digitization of folk art. In their 2022 study, Zhang recommended using visual sensing images to disseminate folk art in urban environments digitally. The integration of optical sensors played a crucial role in accelerating the digitalization of folk art Wang (2020). Advancing the contemporary advancement of folk paper-cutting art modeling using computer-aided analysis Wang (2022). The exploitation of folk-art resources is achieved by applying virtual reality technology, which involves reconstructing and integrating resource content. This process is based on the ALS collaborative filtering algorithm, ensuring the digital protection and effective utilization of folk-art resources.

3.3. Analysis of the top 20 authors published

According to the top 10 authors of 'Folk Art' and the number of citations (Figure 6). Moskow has constantly published research on dentistry in folk art from 1982 to 1991. The contents encompass several elements, such as the dentist's window painting aspects, including color, form, space and order. The authors of the publication are Wang, Zhao, Chen, Duan, and Liu. The publication was released in 2010. They are researching the craft of paper-cutting to develop a digital approach for creating paper-based artwork (Xuxiao, 2013). An analysis of the symbolic meaning of auspicious motifs in Chinese folk art, using paper cutting from Shaanxi, China, as a case study (Wang, 2023). Establishing a comprehensive repository of folk-dance resources by leveraging the power of the 'Internet+' to foster innovation and growth (Wang and Jin, 2018). Conducting research and experimentation on contemporary Chinese garden design using the Arcadia community as a focal point. Kumpikaitė researched several topics related to Lithuanian folk fabrics, including the colors used, the traditional use of yarn, innovations in fabric production, the incorporation of fancy yarns in dress materials and patterned knitting in skirts. This research was undertaken between 2008 and 2014 (Yue). An analysis of the current creative features seen in the traditional clothing patterns worn by children in the Han ethnic group (Liu et al.). Examine the transmission and advancement of folk-art network intelligent technology development and application using multimedia platform technology (Kukle & Wyatt, 1998). Utilizing computers as a technical tool, this project involves digitally simulating and analyzing traditional Latvian border motifs. An analysis of research topics pursued by scholars worldwide reveals a persistent enthusiasm for studying folk art. These scholars have conducted extensive investigations in specialized domains tailored to the unique attributes of folk art in their various nations. Over the past few years, mainland Chinese experts have been conducting extensive and in-depth research on folk art, and this tendency has been steadily increasing.

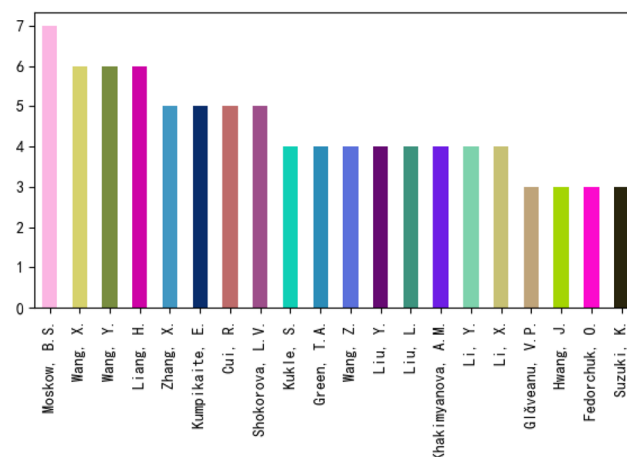

Figure 6. The frequency analysis of the top 20 authors.

3.4. Co-occurrence keywords

The study found that the authors used Vosviewer's co-occurrence analysis to create network diagrams. Figure 7 shows the relationships between keywords. The keywords of the analysis were repeated at least

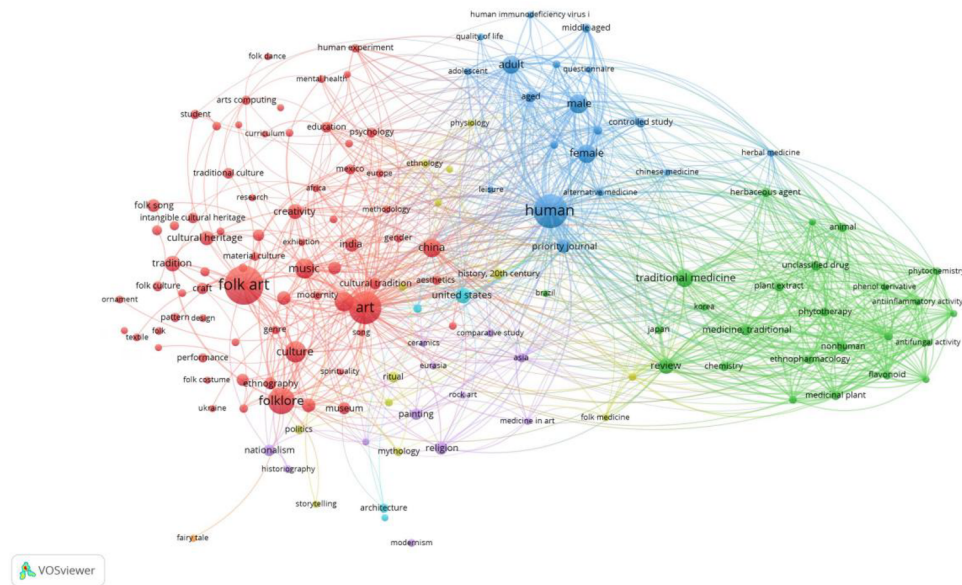

Figure 7. Co-occurrence keywords network diagram.

four clusters in the selected articles. Results 356 keywords were obtained. In order to narrow the visualization scope to a group of manageable keywords, the irrelevant keywords 'review' and 'article' were removed. Finally, 342 effective keywords were left. There are six clusters of keywords. Clusters represent collections of closely related nodes, and items that occur more frequently at the same time tend to be closer to each other in the visualization. The correlation strength method was used to form clusters. Among the four clusters, associating keywords is to reveal the direction of the main research content and the trend of the research topic. The following four clusters are mainly analyzed.

3.4.1. Red cluster: folk art and cultural heritage

The red cluster mainly reveals the related art forms involved in folk art, the relationship between folk art and the various folk art forms, with the main keywords being folk crafts, folk, cultural heritage, folk music (Tullberg, 2018) and (Baatarnan, 2007). Indian dance and Dragon dance (Budianta, 2007) are both material and intangible cultural heritage, and their protection and inheritance methods have attracted academic attention. Bhela's approach to preserving and enhancing India's rich, diverse, multicultural, multilingual cultural heritage so that it continues to be a vibrant and vibrant part of community life (Bhela, 2010). Dostal proposed a basic school focusing on folk traditions and handicrafts with schools as the education base, extending the possibility of intangible cultural heritage and its development (Ying and Wang, 2021). To examine the transmission of folk beliefs and folk art within the framework of intangible cultural heritage, we analyze the cases of local god patrols in China and the 'Phi Khon Nam' ceremony in Thailand. These case studies provide insights into an alternative mode of transmitting folk beliefs and folk art. The aesthetics of everyday life serve a purpose that extends beyond governmental efforts to save intangible cultural assets. In her study, Jadudova (2019) examines the significance of Slovak folk-art productions as integral components of cultural heritage and vital manifestations of creative arts. The publication's authors are Dworzecki, Nowicka, Urbanek, and Kwiatkowski. The publication was released in 2020. Legal approaches to safeguarding cultural assets. The preservation of the country's cultural heritage through legal measures and the efforts of the Polish police in this domain (Ma and Cao, 2022). Developing an application that focuses on the intangible cultural legacy of folklore, beginning with the historical roots of traditional arts.

The application will organize and classify the items based on their purpose and distinguishing features (Sándor, 2023). Expounding on the presentation of Hungarian cultural heritage through the utilization of ethnography and the revival of folk art, reconsidering the cultural backdrop and purpose of folklore renewal in response to contemporary problems (Rosenstein et al., 2023). Examining the economic aspects

of the financial and funding status of living cultural heritage, including customs and folk art, in the non-profit sector (Wei, 2022). An examination of studies on intangible cultural heritage in China since the 21st century, focusing on its geographic aspects (Yahoo, 2023). This study examines the historic Zhuang villages in Longji, China. It asserts that the development of intangible cultural heritage serves not just as a form of artistic representation and attraction for tourists but also as a way for individuals to express themselves and actively engage with their surroundings (Xu and Zou, 2022). This study aims to investigate the application of big data in analyzing the cultivation of research talent for the deep integration of intangible cultural heritage inheritance and art and design education in colleges and universities. Additionally, it seeks to utilize big data technology to collect, preserve, retrieve, reproduce, integrate, disseminate, and use information related to intangible cultural heritage. Researchers globally have suggested several protection techniques for cultural heritage, considering its disciplinary qualities and incorporating folk art.

3.4.2. Green clusters: education, digitization

3.4.2.1. Folk art become a crucial component of arts education curricula. Art education also plays a role in the preservation of intangible cultural heritage. Xu proposes the integration of intangible cultural heritage and in-depth analysis of the relationship between intangible cultural heritage and art design education (Xu & Zou, 2022). Zhou believes that the means of folk art should be diversified. Saleepun (2024) examines folk dance as the subject of investigation, explores the characteristics of diversity and identity within higher education dance programs and enhances the incorporation of local cultural elements in educational courses. In his 2021 publication, Wang elucidates the correlation between folk art and art design and advocates for the incorporation of folk art into design and art education at the tertiary level. In his 2008 publication, Mukhopadhyay suggests implementing environmental education to foster worldwide discourse on visual culture, education and art, utilizing Indian folk art as a case study. Addo and Adu (2022) investigate the incorporation of folk resources in creative arts education in primary schools in Ghana. The study explores how folk resources can contribute to the sustainable development of cultural resources in Ghana's music and visual arts education. Feng et al., (2017) illustrate how folk art can be taught and learned. They also offer a definite interpretation technique to enhance the effectiveness of teaching and learning in arts education.

3.4.2.2. Digitization expands new paths for folk art preservation and inheritance. With the development of The Times, digital technology has become a more effective tool for the protection of folk art. Khac et al. (2021) proposes digital preservation and management for the protection of traditional artistic performances (Wang et al., 2010). The objective is to develop a comprehensive framework for a multimedia virtual system focusing on folk art-paper-cutting. This framework will integrate folklore, communication, computer science and information science elements to create a digital platform designed explicitly for Hebei paper-cutting. The aim is to synthesize and conduct research on this platform (Jialiang Lu et al. 2023). This work analyzes Nanjing Yunjin's color halo formula through a color study approach. It aims to digitally extract the color of the Nanjing Yunjin color halo, thereby enhancing the traditional folk artists' reliance on empirical cognition for recording standard colors (Gong, 2022). Created a digital platform for conventional art that employs microprocessors to safeguard the process of converting fine art into digital format. The digital architecture age has emerged, marked by the integration of 'traditional architectural art elements' and 'digital technology' (Feng & Zhang, 2021). Analyzing the texture and color of the surface materials used in ancient village buildings, as well as the design characteristics of the building components. Creating a standardized, modular, informative digital model establishes a digital language. Developing a database for the digital system of Hebei's ancient village buildings. In short, IT technology provides new paths and methods for the protection and inheritance of folk art.

3.4.3. Yellow cluster: human, females

Folk art is the art created by working people in their daily life. Folk art is closely related to human beings, especially with women have a more direct creative relationship. Song conducts study of modern and contemporary women's dress and traditional dress forms. Karpati (2013) studied the shamanistic music of Japanese women, with women as the main players, and studied the relationship between folk music activities and women's social status.

The authors of the research are Jin and Liu (2013). The paper was published in 2013. By focusing on studying Mongolian folk songs and long tunes, researchers have obtained a significant amount of physiological and psychological parameters to understand the acoustic characteristics of male and female voices in traditional Mongolian folk long tunes. This research has played a crucial role in developing and preserving long tunes while establishing a new study area. Romanova (2014) examined the conventional attire worn by women in the Arkhangelsk region, investigating its framework of versatile moral and aesthetic principles. The publication authors are Yoncalik, Demirel, and Yoncalik (2017). The journal was published in 2017. The study showed that female physical education teachers are more favorable toward instructing traditional dances than their male counterparts. The trainers of martial arts organizations exhibited the most favorable disposition towards folk dance. Depictions of women's dress and beauty in the context of contemporary Chinese art history, Wang (2021) focuses on analyzing particular artworks and ideas that represent women artists. I will explore the intricate relationships among fashion, art and the position of women, as well as their impact on the development of Chinese feminism and the portrayal of women in the history of modern Chinese art.

3.4.4. Blue cluster: folk art, China

In recent years, more and more scholars have strengthened their research on folk art, especially more Chinese scholars have paid attention to and explored the communication and communication of Chinese folk art on the international stage. Gao (2022) applies the characteristics of paper-cut art to modern visual communication design. According to Jiabao (2021), Chinese folk customs represent the symbolic language of 'Chinese characteristics' in the discourse of contemporary art. Wang (2021) combines the artistic features of traditional Chinese ancient costume with fashion for the practice of artistic language expression.

Lopes (2014) illustrated the significance of Chinese folk art and popular culture by examining folk art and popular material culture from various places. The Oriental Museum enhances the portrayal of Chinese culture by providing a more comprehensive viewpoint. Significant colleges have recently introduced academic programs focused on art and design.

Qiuxia et al. (2022) conducted a thematic analysis of Chinese characteristic souvenirs, focusing on the design perspective. It aims to examine the necessary knowledge and methodologies for designing souvenirs based on practical experience. Li (2017) explore a virtual reality-based multimedia platform that integrates Chinese folk-art performances with virtual scenarios created by VR technology, aiming to facilitate students' comprehension of Chinese folk art. Luo (2017) elucidate the distinctive attributes of several modern Chinese folk art disciplines and stimulating the global curiosity of artists and civilizations (2018). An investigation on the implementation of digitization in folk art, specifically focusing on Chinese New Year paintings as a case study and investigating the correlation between folk art and digitization and incorporating technology in animation production to save and conserve folk art. Xuxiao (2013) analyzer analyzes the symbolic patterns seen in Chinese folk art, specifically Shanxi paper-cutting, and investigates the auspicious connotations associated with their distinct conceptions. Illustrates the popular comprehension of life expectancy. Shi (2022) presents a quantitative analysis model for the inheritance and protection of Chinese folk painting art, utilizing data mining techniques. The journal 'Mathematical Problems in Engineering' will be published in 2022. The citation is Xia (2020). An investigation on the influence of folk-art education on college students' mental well-being, utilizing the aesthetic appeal of Chinese folk artworks. Engaging in folk art education can help reduce psychological stress and foster the growth of mental well-being. Kuang (2020) examines the impact of folk-art appreciation on college students' psychological well-being, using pedagogy and cognitive psychology insights. The study demonstrates that engaging in activities that promote the appreciation of folk art can effectively reduce depression symptoms in college students. Chinese folk painting art fulfills individuals' spiritual and material desires while fostering their physical and mental growth.

4. Conclusion

Folk art is an important part of cultural heritage, and literature review of folk art is a preparation for the study of building a local visual model. This study aims to fill in the research gap of literature review on folk art and clarify the current research hotspots and future research trends. The research results show that the integration of folk art and cultural heritage, education, folk art and modern design has become

the main topic of this research field, art healing has become a new interdisciplinary research and development topic, and the application of high-tech in teaching innovation will become a new hot spot of future research.

There are significant gaps in the comprehensive literature review of folk art. In order to bridge this gap, this paper uses bibliometric to review the existing research on folk art based on Scopus database. With the impact of modern industrial design on folk art and crafts, folk art has become a hot topic of cultural communication in recent years. Therefore, this study has two main purposes: (1) to analyze the nature and evolution of academic articles related to folk art. (2) Identify thematic areas related to folk art research and their links with interdisciplinary fields. To achieve this goal, we obtained articles from Scopus and performed bibliometric analyses of 2353 listed journal articles, books and related international conference articles. Through analysis, research activities related to folk art have increased significantly, and multidimensional, interdisciplinary research has also been illustrated. After over 20 years of practice and investigation, all areas of society and academia have gathered extensive expertise in safeguarding intangible cultural assets. The integration of folk art with many academic disciplines has facilitated research in interdisciplinary domains. Notably, experts in anthropology, folklore, art, geography, psychology, economics and education have made exceptional contributions to the preservation systems for both intangible and physical cultural heritage. The research topics are formulated to incorporate issues such as everyday existence, societal equity, hereditary transmission, the interplay between nature and society, and global interchange.

Nevertheless, there remains a need for additional investigation into the effects of interdisciplinary collaboration and the methods by which folk art might be utilized and integrated into contemporary design. Due to the selection of only one database as the sample for the study, the results are constrained. Additionally, additional investigation into scholarly viewpoints is required. It seeks to enhance the core principles of folk art and explore the theoretical underpinnings of folk art as an academic field.
